a Linear interpolation
A straight line between the last value before and the first value after the gap
measured
gap
filled
temperature
hidden true values
b Daily patterns
The shape of the days either side, adjusted to meet both ends of the gap
c Four-week average (as in diyepw)
The average of the same hour of day over four weeks; need not meet the gap ends
d Nearby station
The same hours from a nearby station, checked against the main station first
temperature
nearby station
e ERA5
The same hours from a global weather model; smooth, misses local extremes
ERA5
f Stepwise
Takes the first source that works: here the nearby station passed its checks (Figure 1)
